

Plant Crib

AMBROSIA

The spread of species of *Ambrosia* L. in Britain is of interest in relation to hay fever and climate change, and some recent distribution maps are given in Rich (1994). Details of all records to T. C. G. Rich please. Try to avoid breathing in the pollen when collecting material (most noxious hayfever plants in the world). The occurrence of any self-sustaining populations is of particular interest.

Reference Rich, T. C. G. (1994). *Grana* **33**: 38-43.
