

Plant Crib

GILIA

Two species may occur as rare casuals (Wurzell 1995) and may be distinguished as follows:

	<i>G. capitata</i> Sims	<i>G. achilleifolia</i> Benth.
Inflorescence	Densely capitate	Loosely capitate
Corolla	8-12 mm, light blue-violet to whitish	10-20 mm, dark blue-violet
Stamens	As long as or longer than corolla lobes	Shorter than or sub-equal to corolla lobes
Stem leaves	Largest around middle of plant, closely spaced with narrow lobes	Largest above middle of plant, distantly spaced with broad lobes
