

## 1 *Euphrasia rostkoviana* Hayne

*E. campestris* auct. angl. non Jord, *E. campestris* var. *neglecta* Bucknall., *E. fennica sensu* Bucknall non Kihlm. ex Mela, *E. hirtella* auct. angl. non Jord. ex Reut. pro parte, *E. officinalis* subsp. *pratensis* Fr., *E. officinalis* subsp. *pratensis* Schubl & G. Martens, *E. officinalis* subsp. *rostkoviana* (Hayne) F. Towns., *E. officinalis* subsp. *rostkoviana* forma *tenuis* F. Towns., *E. rostkoviana* var. *obscura* Pugsley, *E. rostkoviana* subsp. *rostkoviana* Hayne

### Rostkov's Eyebright

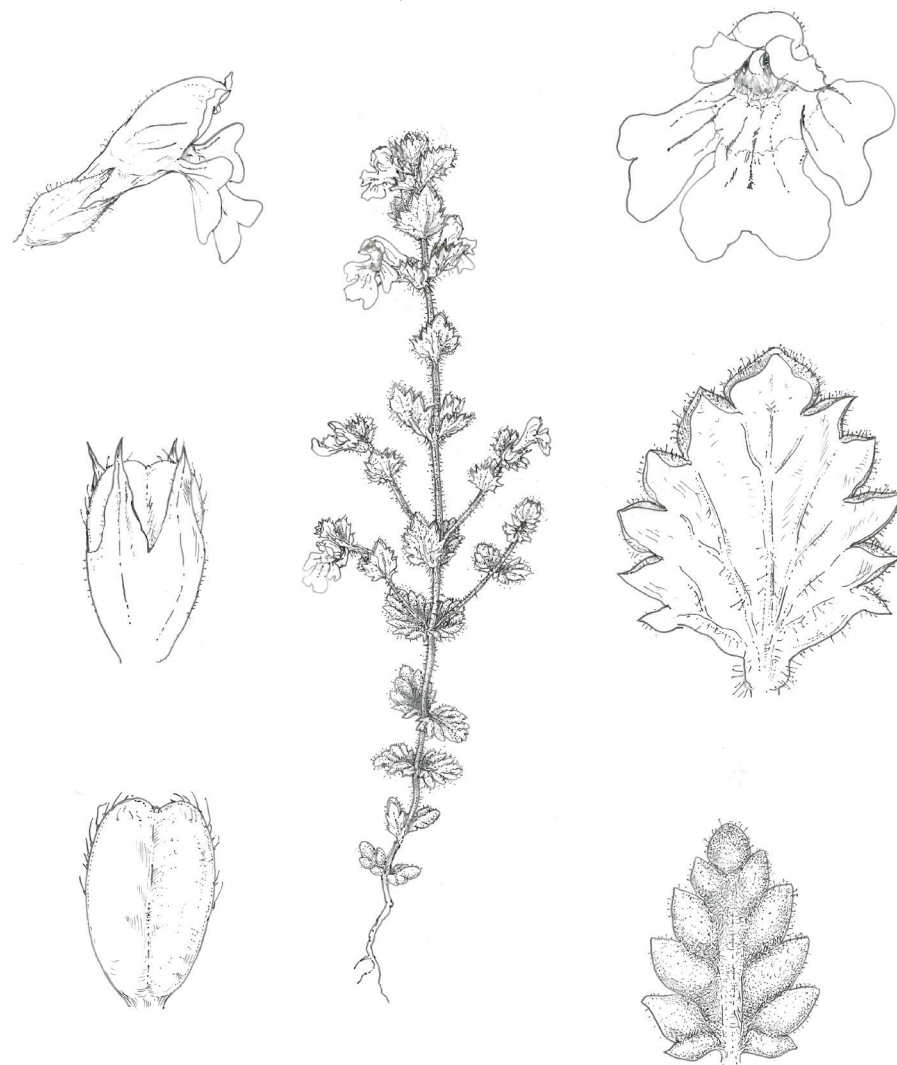

**Stems** 10-40(50) cm, green or slightly reddish, erect. Cauline internodes shorter to 3 times as long as leaves, lower floral internodes shorter to 4 times as long. **Branches** 1-12 pairs, slender, ascending or erect, often branched again. **Leaves** bright green and often conspicuously veined below. Cauline leaves 3-17mm, suborbicular or broadly to narrowly ovate, obtuse at the apex with 1-7 pairs of obtuse to subacute teeth, not much longer than wide, sessile or rarely shortly petiolate, with a truncate or rounded base. Lower floral leaves 6-15mm, generally smaller than the upper cauline, deltoid or broadly ovate to oblong-ovate, obtuse to acute at apex with 4-9 pairs of subacute to acuminate teeth, not much longer than wide, the basal pair patent or retrorse, sessile with a rounded, truncate or cordate base. All (save sometimes the lowest leaves) with more or less dense, long multicellular glandular hairs with the stalk 10-12 times as long as the gland. **Lowest flower** at node 6-10(14). **Corolla** (6.5)8-12 mm, white or with a purple or lilac upper lip. **Calyx** green, teeth narrowly or very narrowly deltoid, acuminate
