

Cambridgeshire (v.c.29) Rare Plant Register

Epipactis palustris

Cambridgeshire (v.c.29) Rare Plant Register

Sixth edition 2019

Jonathan Shanklin
BSBI co-recorder for Cambridgeshire

Cover: *Epipactis palustris* (Marsh Helleborine) at Chippenham Fen in 2016. Previously recorded over the last century at Sawston Fen (1918), Thriplow (1931), Wicken Fen (1939) and Dernford Fen (1977).

Cambridgeshire (v.c.29) Rare Plant Register

The basis of this Register is those plants listed in Part 1 (Rare Species) of the “Cambridgeshire Flora Records since 1538” <http://www.cambridgeshireflora.com/>, together with threatened plants from the GB and English Red Lists that are or have been found in Cambridgeshire and plants that are native or archaeophyte but are now rare in the county. A few plants of historic interest are also included.

Cambridgeshire has an existing listing of what were considered rare plants in the county that used subjective criteria and this was published online in 2000. These rare species are listed in detail in Part 1 (Rare Species) of the “Cambridgeshire Flora Records since 1538” <http://www.cambridgeshireflora.com/>. Most species from this listing are included in this Register, though a few, such as some halophytes, are now sufficiently common that they have been excluded. I have taken a pragmatic approach in updating this listing. First species from the England Red List (ERL) that have a threat status of EW, CR, EN or VU and which were not previously included were added. Secondly any additional native or archaeophyte species that have only been found in six or fewer monads since 2000 were added. Because it is possible that a plant could be in four monads but only in one site, I have taken six monads as an upper limit for rarity. The alternative approach of defining a rare plant as occupying a maximum of three “sites” gives similar results, but is harder to implement automatically on the DDb. In any case only a few species would be rejected if this approach was followed and these are noted in the comments. Species scarce in the county are not included here, but are included in the companion Register of Plants of Conservation Concern found in Cambridgeshire. Using an earlier starting date would remove some species from the Register, however the date chosen is in line with Atlas 2020 recording and gives a better indication of current threat. Some nationally rare or threatened plants are common in the county because this is their heartland. Following a suggestion made at the BSBI Recorders Conference in 2018, hectad records of all native species were assessed for change in v.c.29 and as a consequence 26 additional plants were added to the listings.

Notes:

1. Nomenclature follows Stace IV (2019)
2. County Status is based on two parameters:
 - a) The monad counts from 2000 and this may give: Extinct, Rare (1 – 6 monads), Scarce (7 – 16 monads), not listed because it is common and Data Deficient.
 - b) The ratio of post 1999 hectad counts to total hectad counts, where the species has occurred in at least six hectads and this may give: Vulnerable (decline >30%), Endangered (decline >50%) or Critically Endangered (decline >80%). Plants that are only Vulnerable in the county are not listed here.
3. The Monad Count gives the post 1999 total and is taken from the BSBI DDb. All records are counted, whether in the wild or not. Records of species will not be counted if they were only recorded at tetrad or hectad level.
4. The known dates of first and last record are given.
5. Some species listed in Part 1 of the on-line Flora are not native or archaeophyte. These are noted in the Comment as Flora. Species that have Cambridgeshire Biodiversity Action Plans are indicated by CBAP.
6. GB or ERL Status may be: Nationally Scarce, EXtinct, Extinct in the Wild, CRitically endangered, ENdangered, VULnerable, Near Threatened, Least Concern, Data Deficient or Waiting List. Species in decline in England, though not necessarily rare or threatened, are indicated by Dec.
7. Plants that have not been seen post 1988 are listed (as EX) in the hope that they may be refound. Species not seen for over 30 years are listed in the Appendix.
8. Hybrid species are not listed, in line with the ERL practice. There are many hybrids that could be included and these are listed in the companion RPCC.
9. The complete distribution of Chara, Hieracium, Rubus and Taraxacum species is generally not well known in the county and they are largely omitted from this Register, though are included in the Cambridgeshire Register of Plants of Conservation Concern.

10. Site details and species accounts etc can be found in the forthcoming Flora of Cambridgeshire by Alan Leslie, in the online Cambridgeshire Flora Records, on the BSBI web pages and from the DDb.
11. See the Register of Plants of Conservation Concern found in Cambridgeshire for other scarce or uncommon species.
12. Annual records are required for all plants featuring in this list. Those with a County status of EX, DD, R or S should be given a six- or eight-figure grid reference accuracy depending on the number and distribution of the plants. Monad accuracy is usually sufficient for all others, unless they are away from their usual occurrence areas.

2018 January: Updates for plants recorded in 2017

Myosotis discolor deleted – now scarce
Potentilla argentea deleted – now scarce
Leersia oryzoides added – new to county
Polycarpon tetraphyllum added – previously omitted
Trifolium ornithopodioides added – new to county

2018 March : Update

Juncus bulbosus added – three BCN WT survey records deleted giving four sites.

2018 May : Update

Nitella opaca added – new find

2018 August

Lolium temulentum added – re-introduction
Rubus flexuosa and *Rubus pyramidalis* deleted from extinct list, present in Gamlingay area

2018 October

Species in severe decline in the county added

2018 December

Update based on DDb records

2019 February

Scirpoides holoschoenus added – new to county (planted)

2019 March

Nomenclature revised to Stace IV

Appendix: Extinct Plants

The following plants have not been seen in the county for at least 30 years. Standard information on them is given in the county Scarce Plant List.

<i>Adonis annua</i>	<i>Hieracium oblongum</i>	<i>Polygala serpyllifolia</i>
<i>Alchemilla filicaulis</i> subsp. <i>vestita</i>	<i>Hieracium rigens</i>	<i>Potamogeton alpinus</i>
<i>Allium ampeloprasum</i> var. <i>ampeloprasum</i>	<i>Hieracium trichocaulon</i>	<i>Potamogeton polygonifolius</i>
<i>Alyssum alyssoides</i>	<i>Hordelymus europaeus</i>	<i>Pulicaria vulgaris</i>
<i>Antennaria dioica</i>	<i>Hypericum elodes</i>	<i>Ranunculus baudotii</i>
<i>Anthoxanthum aristatum</i>	<i>Hypericum maculatum</i> subsp. <i>maculatum</i>	<i>Ranunculus hederaceus</i>
<i>Arnoseris minima</i>	<i>Hypopitys monotropa</i>	<i>Rhynchospora alba</i>
<i>Artemisia campestris</i>	<i>Hypopitys monotropa</i> subsp. <i>hypophegea</i>	<i>Rubus conspicuus</i> cf
<i>Atriplex pedunculata</i>	<i>Hypopitys monotropa</i> subsp. <i>monotropa</i>	<i>Rubus polioides</i>
<i>Blechnum spicant</i>	<i>Jasione montana</i>	<i>Rubus rhombifolius</i>
<i>Botrychium lunaria</i>	<i>Juncus squarrosus</i>	<i>Ruppia spiralis</i>
<i>Bromus hordeaceus</i> subsp. <i>thominei</i>	<i>Lactuca saligna</i>	<i>Silene dichotoma</i>
<i>Cardamine amara</i>	<i>Laser trilobum</i>	<i>Solidago virgaurea</i>
<i>Carex canescens</i>	<i>Lathraea squamaria</i>	<i>Teesdalia nudicaulis</i>
<i>Carex diandra</i>	<i>Limonium bellidifolium</i>	<i>Tephroseris palustris</i>
<i>Carex dioica</i>	<i>Limonium vulgare</i>	<i>Thymus serpyllum</i>
<i>Carex elongate</i>	<i>Limosella aquatica</i>	<i>Trichophorum germanicum</i> agg.
<i>Carum carvi</i>	<i>Linum bienne</i>	<i>Trifolium aureum</i>
<i>Caucalis platycarpos</i>	<i>Linum radiola</i>	<i>Triglochin maritima</i>
<i>Centaurea calcitrapa</i>	<i>Liparis loeselii</i>	<i>Tulipa sylvestris</i>
<i>Centunculus minima</i>	<i>Littorella uniflora</i>	<i>Turgenia latifolia</i>
<i>Chamaemelum nobile</i>	<i>Lycopodiella inundata</i>	<i>Ulex minor</i>
<i>Cicuta virosa</i>	<i>Lycopodium clavatum</i>	<i>Utricularia intermedia</i>
