Future opportunities for collaboration (2 years ago)

- Atlases
- Measuring change and understanding causes
- Technology to support recording and verification
- Specific surveys to understand the impacts of new threats, e.g. Non-natives; new diseases
- Establishing a National Plant Monitoring Scheme

Build and nourish a network of recorders and experts

Usable systems, excellent feedback, understanding motivations...

Collectively identify gaps in what to record and where

Uplands, urban areas, invasives

Understand challenges and opportunities from new data types

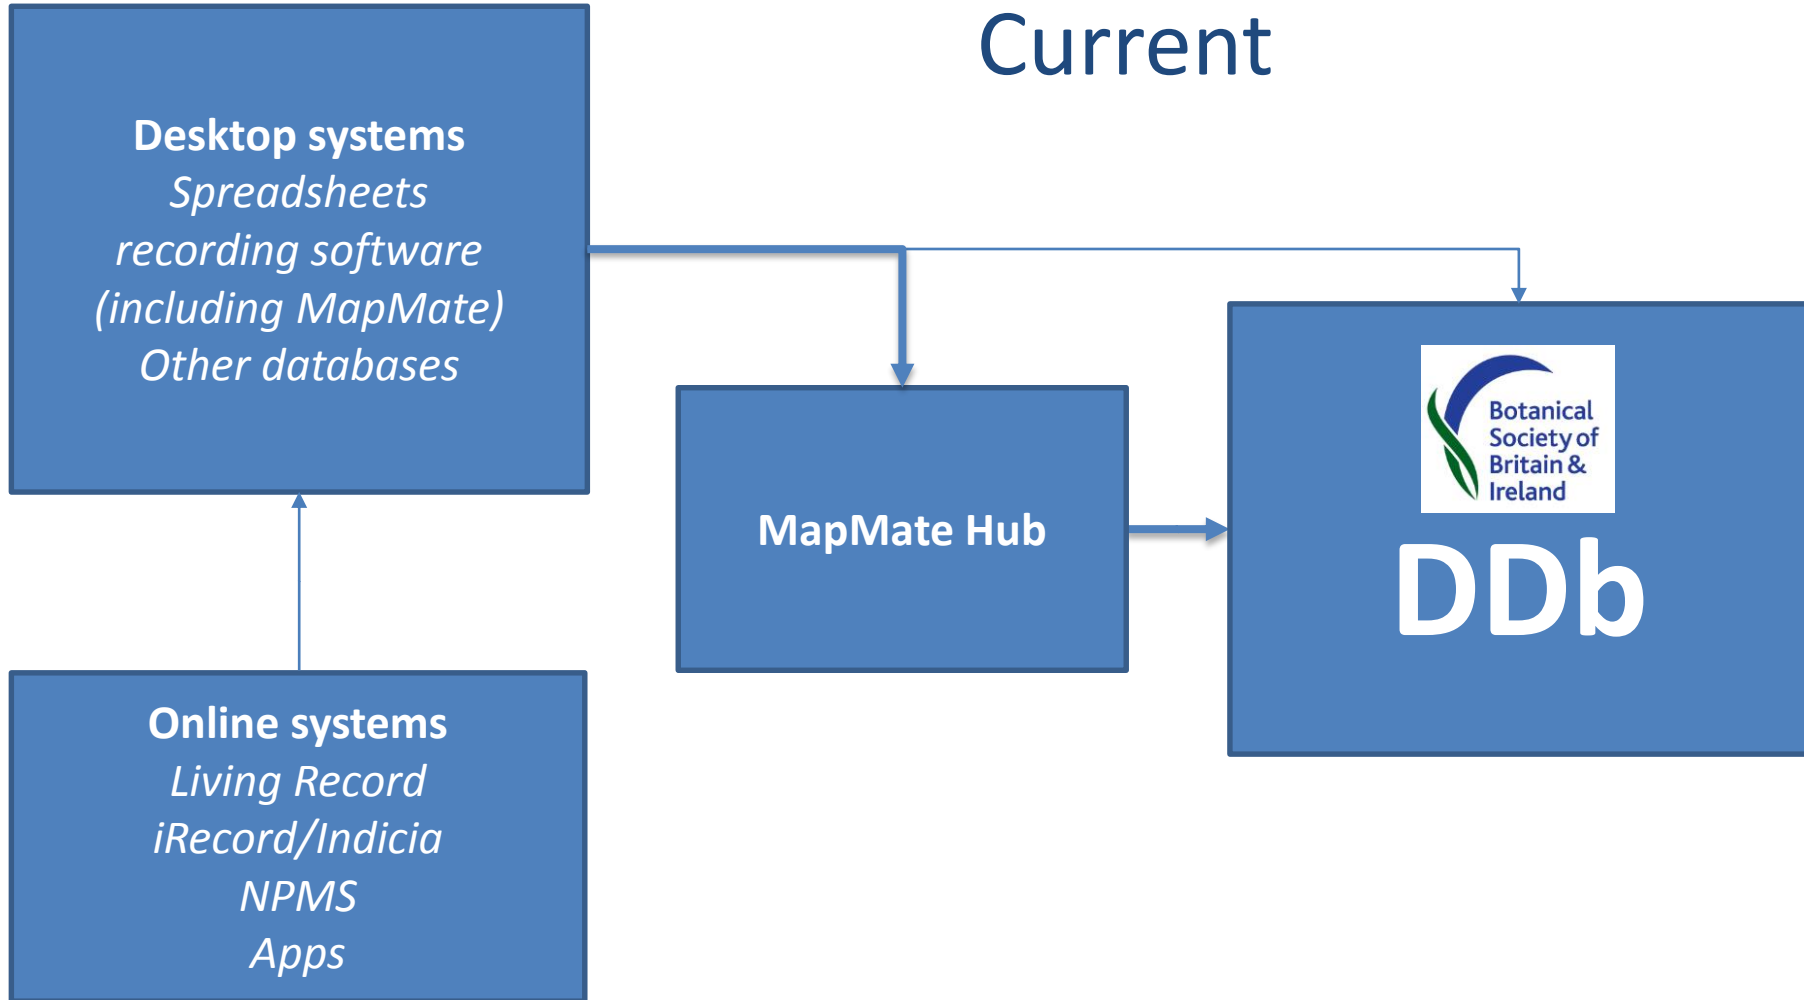

How to take advantage of molecular data, photos....

Assess and accounting for effort, ID certainty and bias

Combining citizen science, structured monitoring....

Data to help address emerging challenges?

Ecology of species, species associations, environmental data....

Enter a vascular plant record card

[Grid square](#) [Plant records](#) [Review and submit](#)
Date:

Select the date of the record.

Recorder name(s):

Enter the recorder's name, if different.

Location:

Give a name, or set of names, that describe the locations surveyed.

Enter a 1km or 2km grid reference:

Enter the grid square recorded. Use DINTY (e.g. SP12A) format for tetrads.

Or search for a place on the map:

Or simply click on your rough position on the map.

Excellent! 1km square selected. If your position is wrong, either click your actual position again or zoom out until your position comes to view, then retry.

Time surveying (hh:mm):

Notes:

 Grid square [Plant records](#) [Review and submit](#)

 You are entering records for **SU6189**.

Please enter all the species you saw at one site on a single day and any other information about them. You can enter a grid ref for any records which you'd like to provide a precise location for, otherwise leave this box blank to use the grid square SU6189 for the record. Then move to the **Review and submit** tab before submitting your records.

Species 	Determiner	Status	Stage	Finer grid ref	Add photos
  <i>Urtica dioica</i> - Common Nettle		Native	▼ flowering ▼		Add images +
  Cornflower - <i>Centaurea cyanus</i> 		Introduced	▼ flowering ▼	SU611893	Add images +
  Corn Marigold - <i>Glebionis segetum</i>		Introduced	▼ flowering ▼	SU611893	Add images +
  <i>Acer campestre</i> - Field Maple		Introduced - established	▼ mature ▼		Add images +
  <i>Acer pseudoplatanus</i> - Sycamore		Introduced - established	▼ mature ▼		Add images +
  Himalayan Balsam - <i>Impatiens glandulifera</i>		Introduced - Invasive	▼ flowering ▼	SU608889	 Add images +
  Ragged-Robin - <i>Silene flos-cuculi</i>		Introduced	▼ flowering ▼		Add images +
  Bulbous Buttercup - <i>Ranunculus bulbosus</i> 		Native	▼ vegetative ▼		Add images +
  <i>Ranunculus acris</i> - Meadow Buttercup 		Native	▼ flowering ▼		Add images +
		Native	▼ flowering ▼		Select a species first

'The river could become unusable' – Invasive species Pennywort continues to fill the Cam

The Cam could become 'unusable' as an invasive plant continues to spread in Grantchester

Index Value (1970 = 100)

- Spatial Scale: **1km**
- Temporal scale: **day observations**
- Temporal replication: at least some sites must have **multiple visits per year**. We also exclude all sites with records from only a single year.
- Lists: we make assumptions about **detectability** of species based on how they occur on lists

Temporal precision

Spatial precision

Temporal precision

Spatial precision

- Spatial Scale: 1km or 2km
- Temporal scale: day observations
- Temporal replication: at least some sites must have multiple visits per period (5 yearly).
- Lists: understand how plants are detected during recording visits

Build and nourish a network of recorders and experts

Usable systems, excellent feedback, understanding motivations...

Collectively identify gaps in what to record and where

Uplands, urban areas, invasives

Understand challenges and opportunities from new data types

How to take advantage of molecular data, photos....

Assess and accounting for effort, ID certainty and bias

Combining citizen science, structured monitoring....

Data to help address emerging challenges?

Ecology of species, species associations, environmental data....

Future challenges

- Climate change
- Biological invasions
- Human demographics
- Economic growth and consumption patterns
- New technologies
- Social preferences and attitudes
- Policy and regulatory environment

Botanical Society of Britain & Ireland

Promoting the study, understanding and enjoyment of British & Irish wild plants since 1836.

Recording and mapping what grows where.

Using this knowledge to support nature conservation.
