MONMOUTHSHIRE VICE-COUNTY 35 RARE PLANT REGISTER

This edition updates the first Rare Plant Register produced by Trevor Evans (Evans 2007). Some additional species have been included whereas others have been removed. The reasons for these changes are given below.

Rare and Scarce species

In the RPR by Evans (2007) there are several species which have since been found to be more widespread in vc35 than previously thought. These, *Ranunculus lingua* Greater Spearwort (widely planted), *Iris foetidissima* Stinking Iris, *Echium vulgare* Viper’s Bugloss, *Chrysosplenium alternifolium* Alternate-leaved Golden Saxifrage, *Crepis biennis* Rough Hawk’s-beard, *Myriophyllum spicatum* Spiked Water-milfoil, *Samolus valerandi* Brookweed, *Frangula alnus* Alder Buckthorn, *Poa angustifolia* Narrow-leaved Meadow-grass, *Puccinellia distans* Reflexed Saltmarsh Grass and *Populus nigra* ssp.*betulifolia* Black Poplar are no longer included in this revised RPR as occur at more than 10 sites. Moreover, *Anacamptis pyramidalis* Pyramidal Orchid occurs at almost 40 sites.

The revised RPR recognises locally rare species, both Natives and Archaeophytes, as those that are found in up to three sites in VC35 and locally scarce species which occur in up to 10 sites. Several have been moved from locally rare to locally scarce e.g. *Anthemis cotula*. Species such as *Littorella uniflora* Shoreweed with 11 records are therefore not included.

Some other species, whilst being recorded at more than 10 sites, are considered under threat in a GB or Welsh context and therefore these have been included in this Register. This category includes *Neottia nidus-avis* Bird’s-nest Orchid, *Oenanthe fistulosa* Tubular Water-dropwort, *Sagittaria sagittifolia* Arrowhead, *Platanthera chlorantha* Greater Butterfly Orchid and *Wahlenbergia hederifolia* Ivy-leaved Bellflower. Some Neophytes are also included if they are of conservation concern in a GB or Welsh context such as *Parentucella viscosa* Yellow Bartsia and *Verbascum nigrum* Black Mullein.

Sites are based on actual sites e.g. a particular quarry or on an area within a 1km square or a tetrad. Species with a linear distribution such as *Crithmum maritimum* Rock Samphire are shown in a map form. So too are some widespread or locally widespread species such as *Spergula arvensis* Corn Spurrey and *Euphorbia serratula* Tintern Spurge.

For the majority of species, selected pre 2000 records are included, but are shown in grey type. For those species that we have added to the Rare Plant Register (i.e. not included by Evans 2007), we have not yet listed the pre 2000 records.
