New Flora of the British Isles, edition 3 (2010).....	8

## Plant Crib 1998: Corrigenda and addenda: 22/3/2001

- p. vii. add H. McHaffie to Acknowledgements
- p. 13. Table, under Stem: entries for *E. x littorale* and *E. x dycei* are given the wrong way round. In the figures at the bottom of the page, (e) *E. dycei* should have endodermis around each bundle, a character it gets from the *fluviaatile* parent.
- p. 18. The number of indurated annulus cells is the mean number (cf. *BSBI News* 79: 21-22)
- p. 19. The names for the two bracken silhouettes (a) and (b) should be transposed
- p. 76, *Quercus*. Peduncle lengths for *petraea* and *robur* given wrong way round.
- p. 103. 2<sup>nd</sup> para from bottom: add (Figs a-i) after 'most useful indicators'
- p. 105. *Tilia platyphyllos*, bracts: with a short stalk (to 5 mm) or almost sessile.
- p. 111. *Viola* Table: under Flowers: Fig d should read Fig e and *vice versa*.
- p. 113. The petals are shown the wrong way up, which may be misleading.
- p. 130. *Brassica nigra* beak may occasionally be swollen by an insect larva
- p. 159. Additional corrections to the BSBI Roses Handbooks are:
- p 54: c. 90-150 µm
- p 90: in *Rosa canina* the length x breadth measurements are given the wrong way round.
- p120: 2<sup>nd</sup> and 3<sup>rd</sup> lines up: subfoliar glands, alter to "at 0.05 mm in diameter or less"
- p. 162. *Prunus padus* has brownish to white hairs in axils and alongside lower midrib and (0-1-3 glands). *P. serotina* has pedicels 2-7 mm, and glands present or absent.
- p. 165, 171. *Sorbus croceocarpa* is at least present as a planted tree in Ireland.
- p. 182, 2<sup>nd</sup> line from bottom. *BSBI News* 46.
- p. 186/7. Illustrations of *Medicago* (b) and (d) are wrong way round. *M. arabica* does not always have a black blotch so the stipules are worth examining.
- p 188. Fig (j) *T. pratense*. Some leaflets may be minutely apiculate and the stipules may taper less than shown. Fig (r) *T. ornithopodioides*. Leaflets may be more distinctly toothed at apex.
- p. 189. key, lead 17, first couplet: petiolule more than 2 mm  
Second couplet: petiolule less than 2 mm  
The stipules of *T. dubium* may also be blunter than those of *T. campestre*
- p. 197. Seed sizes in key to New Zealand Willowherbs should be 0.75-0.9 mm *E. brunnescens*, and 0.5-0.9 mm *E. komarovianum*
- p. 206. The stamens/lobule character does not work for distinguishing *P. calcarea* and *P. vulgaris*.
- p. 222. There is still debate as to whether the stems of *O. pimpinelloides* are hollow throughout or not; they are probably both!.
- p. 229, first table. % of STEM height contributed by terminal internode
- p. 235, illustration (d), calyx should be shown cut more deeply (cf. description below); end of fourth line from bottom: 'two pairs of wings'. Legend for *Symphytum* figures should read: (d) *S. caucasicum* (e) *S. asperum* x *officinale* (f) *S. x uplandicum* (g) *S. officinale*.

- p. 253, add CONTINUED to top of first table: Third line from bottom; 'higher than wide'
- p. 254. Illustrations of *Ligustrum* species given the wrong way round!
- p. 264. Swap labels (a) and (d), and (b) and (e).
- p. 265, add CONTINUED to top of first table. Capsules of *V. x lackschewitzii* may occasionally be swollen by an insect larva. End of 2<sup>nd</sup> line from bottom: 264
- p. 279. *Campanula poscharskyana* corolla is usually lobed 2/3-3/4 of way. *C. portenschlagiana* corollas are usually lobed to nearly  $\frac{1}{2}$  way (not  $\frac{1}{4}$ ), and the lobes are often reflexed.
- p. 281. A useful addition is that *Galium constrictum* flowers are pale pink in bud.
- p. 283. Flower colours of *Valerianella eriocarpa*, *rimosa* and *dentata* may be pink (always unless albino or faded?)
- p. 284. Figure letters in key do not match the drawings. Lead 2 first couplet: Fig. e. Lead 3 first couplet: Fig. d. Lead 4 first couplet: Fig. f, g. Lead 4 second couplet: Fig. b, c.
- p. 286. Duistermaat's capitulum sizes are WIDTH x LENGTH!
- p. 287, section 2, line 2; interfertile (not infertile)
- p. 288, key, lead 4: Add stem leaves with sagitate bases and bract usually present for *Crepis capillaris*, and stem leaves absent (bracts may be present) for *Leontodon autumnalis*.
- Lead 5: First couplet should go to 6, second couplet to *Hypochaeris glabra*.
- p. 289. *Crepis capillaris* may have hairs under the leaves on the midrib
- p. 291, *Sonchus arvensis*; mean involucral length given wrong way round.
- p. 292, 4<sup>th</sup> para: End of 4<sup>th</sup> line, add 'Garden lettuce' in gap and add brackets to *L. sativa* in next line. 4<sup>th</sup> line up from bottom, 'there is little obvious leafage' rather than 'there is no obvious leafage'.
- p. 293, key, lead 3 both leads, missing semi-colon separating last characters: auricles; latex
- p. 297. *Crepis nicaeensis*, once a regular casual in seed, has not been seen for years.
- p. 301, illustration: female *Filago* florets also have a pappus
- p. 303/4. Note Hoffman's key lacks *A. x versicolor*
- p. 329 labels: bracteole (not bracteoles)
- p. 338, legend, second line: sheath ligules (x 2), (not sheath (x 2) ligules,)
- p. 358/9. Change *plicata* to *notata* in hybrid notes and on illustrations.
- p. 366. swap names *ferronii* and *thominii* in Table
- p. 369. Table, leaf width of subsp. *repens* 2-15 mm (not 2-8.5 mm)
- p. 374. Authors: K. W. Page, 1987, minor updates T. C. G. Rich 1998.
- p. 382. *Eleogiton* leaves do not have two hollow tubes, but *Zannichellia* does, so key needs rewriting!
- p. 391, add to index:  
*Spergularia marina x rupicola* 93  
*Veronica hederifolia* 265 (not 264)

# Atlas of British and Irish Hawkweeds 9/6/11

Title Page: *Pilosella* Hill (not *Pilosella* L.)

Contents page numbers should read:

List of species within each vice county	438
Vice-county map and list	481
The Botanical Society of the British Isles	484
References	487
Index to Latin names	491

page 419, *H. subleptooides*: remove dot in Channel Islands.

page 496, Index: page numbers should read

P. x longisquama	21
P. x stolonifera	9

The county lists for VCC3 & 4 have *Pilosella aurantiaca* ssp. *aurantiaca*. These entries should be deleted.

Before *Mentha pulegium* enter

*Mentha suaveolens* Round-lvd Mint

This is a very, sweet-smelling, upright and pubescent plant, usually less than a metre tall. The largish, roundish to broadly oblong, rugose leaves are greyish-green beneath. The leaf edges are narrowly curled under, so making the pointed, marginal teeth less obvious. Flowering starts late summer with a long, narrow, terminal, spike-like inflorescence immediately followed by two, opposite, similar ones on peduncles arising from the axils of the top, leaf-like bracts. More pairs arise on longer leafy peduncles from axils of other, larger, leaf-like bracts lower on the stem. The just over 2mm wide, whitish flowers sit in a tubular calyx with each lobe terminating in a long finely-pointed, outward-curving tooth. The stamens and styles protrude noticeably beyond the petals.

It grows in damp sites. In vc35 it is common in riverside meadows particularly by the Wye. 47 t (1 t).

ERRATA The important errors have been underlined

Page 9 23<sup>rd</sup> line drop final 's' from 'theses'.

page 43, for 'Augustus' read 'Augustin'

page 46: Open dots represent old records – pre 1987?

page 114 Col. 1 Last word for ‘Lias’ read ‘Trias’.  
page 137 Col. 1 Last line for ‘Lias’ read ‘Trias’.  
page 137 Col. 2 5<sup>th</sup> line for ‘ShP’ read ‘SP’.  
page 167 Col 2 Heading Glabrous Whitlowgrass should not be in italics.  
page 178 Col. 1 End of line 1 omit ‘and the’.  
Page 206, col 1, 11 line: read ST for SO.  
page 227 Sorbus rupicola for ‘Plate 36’ read ‘Plate 35’.  
page 235 Col. 2 Penultimate line for ‘St Saunans’ read ‘St Sannans’.

- p.693, 1.3 up. Alter grid reference to SN25995159
- p.724, 1.22. Alter RDL to RGL
- p.827, 1.17 up. Alter grid reference to SN578797
- p.867. Add entry: **Armstrong, J. V. & Sell, P. D. 1996.** A revision of the British elms (*Ulmus* L., Ulmaceae): the historical background. *Botanical journal of the Linnean Society* **120**: 39-50.
- p.874, 1.13. Alter *Tendy* to *Tenby*
- p.875. Add entry: **Lynn-Thomas, J. 1932.** "Key of all Wales" in south-west Cardiganshire. Cardiff: Western Mail & Echo Ltd.
- p.878. Add entry: **Pollard, E., Hooper, M. D. & Moore, N. W. 1974.** *Hedges*. London: Collins.
- p.878. Add entry: **Raven, P. H. 1963.** *Circaeae* in the British Isles. *Watsonia* **5**: 262-272.

## New Flora of the British Isles, edition 3 (2010)

First reprint (2011)

Clive Stace

The third edition of *New Flora of the British Isles* is being reprinted in the late summer of 2011, and the opportunity has been taken to update nomenclature where space permits and pagination is not affected. One new combination is also required. The following are the nomenclatural changes that have been implemented:

Page 23 – English names provided:

*Asplenium x jacksonii* – Jackson's Spleenwort  
*Asplenium x microdon* – Moore's Spleenwort  
*Asplenium x confluens* – Confluent Spleenwort

Page 46 – *Picea omorika* Pančić *vice P. omorika* Pancic

Page 144 – *Parthenocissus inserta* (A. Kern.) Fritsch  
*vice P. vitacea* (Knerr) Hitchc.

Page 203 – *Sorbus x thuringiaca* (Nyman) Schönach  
*vice S. x thuringiaca* (Ilse) Fritsch
