

Plant Crib

INULA CONYZAE / DIGITALIS PURPUREA

Vegetative \pm wintergreen rosettes of *I. conyzae* (Griess.) Meikle and *D. purpurea* L. can be very similar in appearance, though obviously there is no difficulty separating the species in flower, and *Inula* is strongly calcicole and *Digitalis* strongly calcifuge. If in doubt, rub the leaves; those of *Inula* are sweet and aromatic (at least when young, and weakly so in winter), those of *Digitalis* are not.
